

The **Native Plants** section is a listing of native plants historically found in the City of Salem. The list divides the plants into three groups: trees and arborescent (tree-like) shrubs, shrubs and ground covers. For each group, the list includes the scientific (Latin) name of a species, its common name, its wetland indicator status, and its associated habitat type. The habitat types are: wetland, riparian, forest, forested slopes, thicket, grass and rocky.
